

Overview

- For today's transportation providers, differentiating their services often means offering premium services like premium onboard entertainment.
- Traditional wireless technology, designed for controlled environments like traditional offices, is not optimized for mobile vehicles. Transportation providers looking for ways to offer movies, games and other infotainment options are forced to stitch together complex, multi-vendor solutions and/or make substantial modifications to their fleets.
- LILEE Systems specializes in premium connected transportation solutions, purpose-designed to deliver onboard entertainment at lowest available costs so owner-operators can provide superior passenger experience while managing costs.

Entertainment Solutions for Connected Transportation Providers

LILEE Systems' onboard Entertainment Solution provides superior passenger experience while optimizing costs.

In today's on-demand society, reliance on mobile devices for work, school and entertainment is only growing, even while commuting and traveling. Passengers have come to expect on-demand entertainment options, no matter where they are. For transportation solution providers, delivering a modern passenger experience can mean ensuring that passengers can use their devices for to view movies, play games and access other forms of popular content even in remote areas where cellular coverage is poor.

The LILEE Systems Entertainment Solution

Once transportation solution providers commit to differentiating services with onboard entertainment, figuring out how to retrofit their fleets and manage content can prove problematic.

LILEE Systems was founded to create technology for trains, shuttles, buses, and vans to improve safety and customer experience. The LILEE Entertainment Solution encompasses hardware needed to view movies, games and other content as well as services to manage content and provide reports and user preferences. Our single-vendor, turnkey solution reduces time, costs and risk while providing superior passenger experience.

Onboard Entertainment

Solution Approach

The LILEE Systems onboard Entertainment Solution is supported by the TransAir™ STS enterprise-class communication gateway. The STS gateway stores content locally, making it possible for customers to use their own devices to access reliable, high-quality entertainment even as vehicles cross through areas with poor cellular connectivity.

Our single-box solution reduces implementation time and costs, saves space in the vehicle and eliminates time, costs and risk of physically modifying vehicles.

The TransAir STS gateways are managed through LILEE's T-Cloud™ and delivers Zero-touch device and content management for transportation providers. Our solution eliminates risk and costs associated with managing complex, multi-vendor solutions.

All LILEE transportation solutions are modular and cloud-managed so customers can adapt equipment configuration and services as technology and business needs change, reducing costs and future-proofing their investment.

Benefits

Integrated onboard entertainment systems to access movies, games, and other popular content

Riders can use personal phones, tablets, and laptops
No additional applications or hardware required

24/7 email support to resolve infrastructure issues

Zero-touch cloud management includes content updates, automatic device onboarding, centralized configuration, and software and firmware updates

Secure content / Digital Rights Management (DRM) / copyrighted

Summary

Today's travelers expect transportation providers to deliver more than a way to get from Point A to B.

The LILEE Systems Entertainment Solution is designed so passengers can use their own devices to watch movies, play games and view other content on vans, shuttles and buses.

Leading transportation providers can implement LILEE's Entertainment solution with minimal disruption. Zero-touch, cloud-manged services reduce time, cost, and effort spent on system and content management, enabling our customers to deliver superior passenger experience
